

Environmental Services

Staying up-to-date with environmental requirements is challenging. Our team of environmental engineers, scientists, and industrial hygienists helps you stay compliant and on top of it all: from your **State Department of Natural Resources, to EPA, OSHA, and more.**

Here to help: Before, during or after construction, for one-time help or emergencies, on an annual basis, or ongoing support.

CASE STUDIES

“The Shive-Hattery team is a pleasure to work with. They explain and help me and my team grow. I never hesitate to reach out. I know they will answer quickly and help with whatever I need.”

- Confidential manufacturing client

From “in a pinch” to indispensable

- A large food manufacturer was **looking for a full-time air compliance specialist.** But, these roles can be hard to fill.
- While they searched for a candidate, **we stepped in to keep things going:** compliance with local, state and federal regulations and reporting.
- We established a **regular on-site presence** to support operational and maintenance teams, respond to ad-hoc questions, and facilitate communication between engineering, production, maintenance, and EHS.
- The client was relieved and thankful for the help. They quickly created an **indefinite delivery contract** to allow us to stay on for the next quarter.
- Eventually, they did find their hire. **But, they kept us too.** We continue to work closely with their compliance professionals to keep the company on track.

Here for the maintenance *and* the milestones

- **We work with an industrial manufacturer yearly** and as required for their ACC, EIQ, GHG reporting, SPCC, SWPPP, and Title V permitting.
- Recently, they **expanded their process with a new addition. We helped them prepare for construction** with wetland delineation, bat habitat survey, air construction permitting, dispersion modeling, and permitting.

Everything environment, on one team

Shive-Hattery's environmental team is a one-stop shop for all of your environmental concerns. We can quickly and accurately determine what you need to move forward... during normal operations, maintenance, construction, or emergencies.
